PRIYANKA REKHAWAR

Java Software Developer

+91 93079 46684 | rekhawarpriyanka1@gmail.com | LinkedIn | Pune, Maharashtra

PROFESSIONAL SUMMARY

Java Developer with 3 years of experience developing and supporting scalable microservices, cloud-native applications, and enterprise banking solutions. Skilled in Java, Spring Boot, Spring Framework, Microservices, Hibernate, JPA, RESTful APIs, AWS, IBM MQ, Oracle/SQL, CI/CD, and production support. Strong domain exposure to Finastra Global PAYplus (GPP), SWIFT MT messaging, ISO 20022 transformations, and high-value payments.

TECHNICAL SKILLS

Programming Languages: Java
Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms, DBMS
Frameworks and Technologies: Spring Boot, Spring Framework, Microservices, Hibernate, JPA, REST
Architecture and APIs: Microservices, Event-Driven Architecture, REST APIs, SOAP APIs, Service Integrations, Asynchronous Processing
Databases: Oracle, SQL, MySQL
Testing and Quality: JUnit, Postman, JMeter, SonarQube, Debugging, Automation Testing
DevOps and Tools: Git, Bitbucket, Perforce, Maven, JIRA, Confluence, WebLogic, SoapUI, Eclipse

WORK EXPERIENCE

Finastra Pvt. Ltd | ***Associate Software Engineer*** **August 2023 - Present**

- Develop and maintain GPP payment-processing features and client-specific enhancements using Java, Spring, SQL, and JSON-based configurations.
- Implement MT and ISO 20022 payment message processing, transformation, validation, and address-mapping functionality.
- Investigate and resolve defects related to payment routing, lifecycle and status transitions, SWIFT messaging, and clearing integrations.
- Contribute to payment enhancements and defect remediation through code fixes, testing, and validation activities.
- Migrate business rules from database-driven configurations to JSON-based configurations, improving maintainability and deployment flexibility.
- Develop JUnit test cases and support defect retesting, regression testing, certification testing, and release validation activities.
- Diagnose application, environment, and configuration issues using logs, traces, and test environments to minimize resolution time.

PROJECTS

Finastra Global PAYplus (GPP) - High-Value Payments

- Contributed to the development, customization, and support of GPP payment-processing functionality for high-value payment flows.
- Worked on payment processing and message handling across MT and ISO 20022 flows, including SWIFT and clearing scenarios.
- Resolved defects involving payment routing and status transitions, message transformation, and missing or incorrectly mapped data.
- Improved hybrid-address mapping and address-field handling across payment messages and the GPP user interface.
- Supported rule and configuration changes, including migrating selected business rules from database-driven settings to JSON.
- Worked on enhancements and defect-resolution activities for customer-specific payment-processing requirements.
- Performed detailed root cause analysis (RCA), trace analysis, and QA-to-Dev trace comparisons to identify and resolve complex issues.
- Implemented code fixes related to payment routing, message validation, field mapping, and payment lifecycle processing.
- Conducted impact assessment, unit testing, and regression validation to ensure reliable and high-quality solutions.
- Strengthened functional and technical expertise in the GPP domain through continuous defect investigation and customer-specific solution delivery.

EDUCATION

BE (IT) Smt. Kashibai Navale College Of Engineering, Pune, MH | 2019 - 2023 **CGPA: 9.05**

CERTIFICATIONS AND ACHIEVEMENTS
